

MARSDEN AUDIO LABORATORIES, INC. —INFORMATION GOVERNANCE MAIL JOURNAL ARCHIVE —SEARCH REPORT, ADDENDUM

Request	IG-SR-2025-0007, addendum 1
Requested by	B. Crozier, Director, IP Operations, January 15, 2025
Run by	F. Drozdov, Director, Information Governance, and P. Nakagawa-Ellery, eDiscovery Analyst
Search executed	January 17, 2025, 09:12 –09:33 PST
Report issued	January 17, 2025
Matter	MAL-JP-2010-0392 (legacy MAL-2010-0392, Yokohama series)
Supplements	IG-SR-2025-0007 version 1, January 14, 2025

1. Why a second pass

Version 1 searched correspondent domain `shinonome-denki.co.jp` with a direction filter, returning only messages on which a Marsden mailbox was sender or addressee. At the requester's instruction the filter was removed, so that messages on which a Marsden mailbox appears **only as a copy recipient** are returned, and search 1 was extended across the full January 1, 2009 to December 31, 2014 range.

Source, provenance, deduplication and chain of custody are unchanged from version 1 and are not restated here.

Additional messages examined	612
Additional responsive items	1

2. The item

October 21, 2013, 15:48. Kaida Takashi, General Manager, Intellectual Property Department, Shinonome Electric Co., Ltd., to Daisuke Sakurai, Intellectual Property Department, Ryowa Electronics Co., Ltd., copied to Ryoko Kagami. Subject 「RE: オブジェクトクラスティング技術のライセンスに関するお問い合わせ」. Japanese, no attachment. It is a reply to an inquiry from Ryowa Electronics dated October 15, 2013, which is not in the journal because neither party to it was on the Marsden tenant.

I am not qualified to say what it means. Osamu and Ryota should read it.

3. Why version 1 did not return it

Both reasons are worth recording, because both will recur.

Marsden is neither sender nor addressee. Ryoko Kagami is a copy recipient and nothing else. A direction filter is the ordinary way to keep a correspondent

search to a manageable size, and it removes exactly this class of document — the one where the useful statement is made to somebody else and we are only watching.

The message contains no form of the matter number. Not MAL-2010-0392, not MAL-JP-2010-0392. It identifies the technology by the WO publication number and by the pending Japanese application number, which is how a third party would naturally identify it, because a third party has never seen our docket.

4. Recommendation

Direction filters should be off by default on entitlement and ownership searches, and the search terms should include every public identifier for the family and not only the internal one. Both points are for the IP evidence procedure rather than for this matter.
