PALLAS □ VERITAN IPM MIGRATION —SCOPE NOTE AND CUTOVER RECORD

Document: IPOPS-MIG-2016-004, version 3 (final, as executed)

Cutover: **February 19, 2016**, 18:00 PST to February 22, 2016, 06:00 PST

Prepared by: H. Lindqvist-Barros, IP Operations

Approved by: E. Bricknell, Chief IP Counsel; D. Okpara, IT Applications

Vendor: Veritan Group, professional services engagement VG-2015-11884

1. Purpose

To record what was migrated from PALLAS into Veritan IPM, what was not, and the derivation rules applied where Veritan requires a value that PALLAS did not hold. This note is the authoritative statement of migration scope. Where a user cannot find something in Veritan, this note explains why.

2. Volumes

	Count
Matters in PALLAS at cutover	4,118
Matters migrated	4,118
Documents in PALLAS at cutover	61,442
Documents migrated	22,907
Free-text notes in PALLAS at cutover	38,610
Free-text notes migrated	0

3. Documents

3.1 In scope

- Register data purchased from the data provider (bibliographic, status, renewals), refreshed at cutover for all live matters.
- Granted documents: letters patent, B1/B2 specifications, registration certificates, issue notifications, for all matters in all jurisdictions.
- Official correspondence and party correspondence **dated on or after January 1, 2014**.
- Documents of class AGREEMENT of any date.

Note on class AGREEMENT. Only documents already held electronically in PALLAS and already classified AGREEMENT were carried. Where an agreement exists in more than one language, PALLAS held whichever version had been scanned; there was no concept of a governing text and no field to record one. 118 of the 214 agreements migrated are English-language translations of a foreign-language original. The originals, where they exist in paper, are in the site file rooms and are not indexed.

3.2 Out of scope

- **All documents dated before January 1, 2014, other than class AGREEMENT.** This includes prosecution correspondence, attorney opinions, party correspondence, invention disclosure forms, search reports and internal memoranda. 38,535 documents.

Rationale recorded at the time: the pre-2014 corpus is 63% of document volume and 4% of document access events over the preceding 24 months; the migration budget did not extend to it; the documents remain available in PALLAS, which will be retained in read-only mode.

Note added 2018-06-29: PALLAS was decommissioned on June 22, 2018. Tape images were placed in the corporate vault under retention schedule RS-07 (seven years from creation). Read-only access is no longer available.

Note added 2023-09-13: Tape images MAL-PALLAS-2016-001 to -044 reached the end of the RS-07 retention period and were destroyed. Certificate of destruction CD-2023-0912 filed with Information Governance.

4. Fields

4.1 Direct mapping

3,914 of 4,118 matters required no derivation beyond the four system-wide rules at §4.3; 204 required additional matter-specific mapping. See appendix B.

4.2 Fields present in PALLAS with no Veritan equivalent

OWNERSHIP BASIS (free text), COST CENTRE OVERRIDE, PAPER FILE LOCATION, OLD SYSTEM REF. Not migrated. See §5.1.

4.3 Fields required by Veritan with no PALLAS equivalent —DERIVATION RULES

Veritan requires a value in certain controlled fields and will not accept an empty or unknown value. The following derivations were applied.

Veritan field	Permitted values	Derivation rule	Matters affected
Matter Class	7 values	from PALLAS TYPE + SUBTYPE lookup	4,118
Jurisdiction Group	12 values	from country code	4,118

Veritan field	Permitted values	Derivation rule	Matters affected
Ownership Status	Sole, Joint, Licensed-In	where the matter carries a program code beginning JD-, set Joint, counterparty taken from the program record, share defaulted to 50%; where the matter carries a program code beginning IN-, set Licensed-In; otherwise set Sole	4,118 (of which 61 set to Joint)
Renewal Responsibility	4 values	from PALLAS annuity provider flag	4,118

Open item recorded at cutover and not closed: PALLAS holds no ownership data. The derivation in the Ownership Status row uses the program code as a proxy. The program code is a cost-allocation classification and is not a statement of ownership. IP Operations recommends that the 61 matters set to Joint be reviewed against the underlying agreements within the first year of operation and the field corrected where the derivation is wrong. Owner: IP Operations. Target: Q1 2017.

(Status as at the date of printing, November 2024: not started.)

5. Notes

5.1 Free-text notes

Veritan's notes model is threaded and typed; PALLAS's is a flat set of headed free-text blocks. No automated mapping was available within the engagement, and the volume (38,610 notes) exceeded any manual option. **No free-text notes were migrated.** Users were advised at the time to re-enter any note they relied on. There is no record of how many were re-entered.

Note headings in PALLAS at cutover, by volume: FILE NOTE (14,882), INSTRUCTION (9,331), COST NOTE (6,004), OWNERSHIP BASIS (2,117), REMINDER (1,890), other (4,386).

5.2 Correspondence

Correspondence in scope per §3.1 was migrated as documents. Correspondence metadata (sender, recipient, direction) was not carried; migrated correspondence appears in Veritan as an undifferentiated document with a date and a title.

6. Not in scope for this or any migration

The corporate mail journal archive is not a system of record and is not addressed by this note. It is a copy of message traffic held by Information Governance and is out of scope for IP Operations systems work.

Sign-off: E. Bricknell, February 24, 2016. "Accepted, with the open item at §4.3 noted. The ownership derivation is a placeholder and must not be treated as a finding. Please make sure that is understood by anyone who reads the field downstream."
